## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-34 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a system for authenticating a user using information received from an authentication provider. Claims 1, 6, 15, 20, 28 and 31 each recite the uniquely distinct features of receiving a login packet having an encrypted challenge string (session identification) and password using transmitted encryption key, a hash of the challenge string and password; decrypting the password and authenticating the password using information received from an authentication provider. Claims 1, 6, 15, 20, 28 and 31 each recite the uniquely distinct features of receiving a login packet having an encrypted challenge string (session identification) and password using transmitted encryption key where the challenge string comprises an applet with a sequence number (session identifier); decrypting the password and authenticating the password using information received from an authentication provider. The closest prior art, Riggins (US 6,766,454), discloses a conventional system for authenticating a user to a network fails to anticipate or render the above obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
